

Inventory Supply Management for PPE and COVID-19 POC Testing

PPEsupplytraining.com

This nine-module training uses real-life examples to illustrate how critical inventory and supply management is to the success of day-to-day operations at a facility, especially when outbreaks occur. Now more than ever, long term and post-acute care facilities must have robust PPE inventory management programs in place, as well as point of care (POC) testing equipment and supplies.

- Learn how to navigate the changing environment of PPE and COVID-19 testing needs.
- Recognize the differences between work week supply needs and weekend or holiday needs.
- Understand how the unique needs of stand-alone facilities differ from those of corporate chains.
- Learn strategies for inventory rotation to prevent waste from expired supplies.

Completion of this course prepares staff with best practices for assessing various situations and effectively addressing common supply and demand issues.
